

SPECIALLY HARDENED STEEL COMBINED WITH FIRST-RATE LOCKING TECHNOLOGY

A hard nut for thieves to crack: the GRANIT™ 460 U-Lock cannot be bent open or attacked using ice spray.

This U-lock has a lot to offer: the 12mm parabolic shackle, the housing and the load-bearing parts of the locking mechanism are manufactured using specially hardened steel. When combined with the ABUS Extra Class cylinder, they result in a lock which can rightly be considered the safest way of securing high-value bicycles. The locking mechanism is a stand-out feature: not only is it particularly secure thanks to the double locking system, but it is also supplied with a coded reversible key. By ordering other locks which are coded appropriately, all of the locks owned by the members of a single family can be operated using one key, for example.

Technologies

- Hardened 15/32" parabolic shackle
- The shackle, the lock body and the structural parts of the locking mechanism are manufactured using specially hardened steel
- ABUS Extra Class cylinder with coded reversible key

Use and application

- Outstanding protection in situations where there is a medium risk of theft
- Ideal for securing high-cost bicycles
- The longer the length of the shackle, the more easily it can be used to secure a bike to a fixed object

Tips

- The lock can be ordered with other keyed-alike locks, all of which are operated using the same key or locking
